

Speed control of three phase Induction motor drive using V/f control

Aim:

To study the performance of three phase Induction motor drive using V/f control

- i. To observe the effects speeds produced with the variation of torque, frequency and modulation index in the above mentioned converter using matlab

Tools Required:

Software

: MATLAB/Simulink.

System requirements : Minimum 4 GB RAM, i5 Processor.

Procedure

Construct the Simulink model as per the circuit diagrams shown in various figures. Use pulse generator to trigger the SCRs.

2. Refer to the aim and connect the required measurement units. Use **scope** to view the waveforms of speed and **display** to view the rms and average values.
3. Configure all the components with the corresponding values at 50 Hz.
4. Configure simulation by using **powergui** block, stiff solver and required time.
5. Run the simulation and note the waveforms across various elements for a specific value of alpha " α ".
6. Vary the firing angle " α ", note the change in speed and tabulate them.
7. Draw the waveforms and graphs

Model

Torque=25.14, Modulation index =0.87

Observations

I) Frequency vs speed

Torque=25.14, $V/f=8$

Modulation index	Frequency	Terminal voltage	Speed
0.67	38.41	307.1	1090
0.69	39.55	316.4	1125
0.71	40.68	325.5	1159
0.73	41.83	334.7	1193
0.77	44.2	353.6	1265
0.79	45.31	362.5	1298
0.81	46.47	371.8	1333
0.83	47.62	381.1	1368
0.87	50	399.8	1439

Graph

Frequency vs Speed Graph

II) Torque vs speed graph

frequency=50, modulation index=0.87 voltage=399.5

Torque	Speed
25.14	1439
24.14	1442
23.14	1445
13.14	1470
11.14	1475

Torque vs Speed Graph
